- Design and develop UI screens with AngularJS, CSS3, SASS, Bootstrap FLEX and Node JS.
- Design and develop REST services with Spring framework.
- Writing API calls for external services.
- Writing Technical Specification documentations.
- Writing and executing shell scripts.
- Writing Karma test cases for AngularJS source code.
- Hazelcast and Spring WebSocket integration for Message Broadcasting.

Union Pacific Railroads Omaha, NE

July 2016 – Dec 2018

Role: Senior Consultant

Projects: Crew Workflow

Description: Crew Workflow is the one of the Crew Management Services (CMS) application module, which creates nearly 150 types of workflow requests. All the request forms are dynamically controlled from Administration module. User Access management also can be controlled dynamically from the admin module. All the UI and REST services are designed and developed.

Responsibilities:

- Played the role of a Senior Java Consultant, working closely with the Product Owner and Architect to breakdown complex monolith legacy system functionality into Restful web services based on Resource Oriented Architecture.
- Designed and developed Restful webservices using Spring framework. Used Spring JMS, webmvc, core, transaction management.
- Designed and developed UI screens using AngularJS and used NodeJS as UI Server.
- Used Oxygen XML editor for designing XML schemas and XSLTs.

- Used TIBCO JMS for messaging.
- Used UP's home-grown SOA tool to expose and consume APIs. Used Open API spec or Swagger.
- Followed SDLC process incorporating Agile methodology using JIRA.
- Test Driven development -JUnit and Mockito were used for unit and integration testing.

Union Pacific Railroads, USA
Feb 2015 - June 2016

Role: Team Lead
Projects: TTD
Description: Rewrite of TTD applications using AngularJS and REST API architecture.

Responsibilities:

- Provided expert guidance and hands-on development for AngularJS framework.
- Guided the team in building responsive UI layer utilizing semantic html5, Bootstrap, AngularJS and REST api architecture while adhering to the latest web UI standards, design patterns, and best practices.

Union Pacific Railroads, USA
Aug 2010 - June 2015

Role: Team Lead
Projects: Physical Resources (MTP, WTY, PPS,LMPC):
Description: Physical Resources project will directly integrate the Supply MMS and Mechanical MCS systems to reduce inaccuracies, rework, productivity losses, inefficiencies and expenses associated with ordering and using material for maintenance of locomotives and railcars. It will provide a Bill of Material system and the ability to accurately forecast demand for components changed at scheduled inspections on locomotives and railcars.

Provided initial support for implementing Facility Map page for LMPC project using AngularJS and REST service.

Responsibilities:

- Understanding the functional specification as well as the technical aspects of the project and preparing the Sprint based delivery plan and deliverables
- Developing Use cases and writing Unit test cases.
- Log4j, Exception handling, EH Caching, Spring Tx, Spring AOP, Spring security, Spring – Wicket integration, auto-wiring are other key area's which are completely taken-up by me.
- Involved in Setting up application in JBOSS Server and configuring HUDSON and MAVEN for application deployment.
- Web layer development using Wicket – Component driven web framework by Apache.
- Used **XML beans** for reading xml configurations .

Union Pacific Railroads, USA
Role: Sr. Java Developer
Projects: ERT (Track Layout)
Description: In ERT as part of SI-00 cell we are showing the track layout to the users. If there is any modification to the track layout rule managers will update the track so that users will have idea about the changes. Track layout also mentions all the control points, switches which are available on physical track.

Responsibilities:

- Provided guidance and hands-on development using HTML5 canvas and JSON objects.

Union Pacific Railroads, USA
Mar 2010 – Aug 2010

Role: Sr. Java Developer
Projects: AIRS
Responsibilities:

- Involved in Creating connections and deploying application into Weblogic Server.
- Log4j, Exception handling, Spring AOP, Spring security, Spring – Wicket integration, auto-wiring are other key area's which are completely taken-up by me.
- Used **XML beans** for reading xml configurations .
- Worked on improving application performance.

Union Pacific Railroads, USA**Mar 2009 – Feb 2010**

Role: Java Developer**Projects: RDT****Responsibilities:**

- Involved in Creating connections and deploying application into Weblogic Server.
- Implemented 3 modules.
- Written Unit test cases.

GE Aviation, USA**Oct 2008 - Feb 2009**

Role: Software Engineer**Projects: eDRB (Electronic Design Record Book):****Responsibilities:**

- Worked with the Business Analyst for requirements
- Involved in Analysis and Low Level Design (Class and Sequence diagrams)
- Implemented Navigation tree and Breadcrumb functionality.

GE Contractual Service , USA.**Feb 2007 - Oct 2008**

Role: Software Engineer**Project: CS Operations Portal:****Responsibilities:**

- Worked with the Technical Architect and have done POC on
- (WebServices, JSR -168 Portlets and Integration with WebMethods).
- Have contributed in the Technical Design Document.
